

Uroflowmeter MK6 – New design, super low price.

The MK6 Uroflowmeter records and charts a patient's pattern of urinary volume and flow. The MK6 system helps physicians in real time assess the mechanics of flow and diagnose abnormalities in voiding patterns (obstructed or restricted flow). The values are displayed, as well as charted, by the computer. The MK6 Uroflowmeter features a high-performance microprocessor and the digital scale (used as the flow sensor) designed to streamline diagnostic uroflow recording.

Microprocessor & RS232 converter

FLOW SPECIFICATIONS

Flow

Range : 0 to 50 ml/s
Accuracy: $\pm 5\%$ fs
Resolution : 1 ml/s

Volume

Range : 0 to 5000 ml.;
Accuracy: $\pm 0,1\%$ fs;
Resolution : 1 ml

Power Supply

9 VDC, 400 mA
Voltage : 200 – 220 VAC
50 – 60 Hz.

ACCESSORIES

Digital scale, used as the Flow sensor.
Miction container.
MK6 software.
Patient database.
RS232 connection cable.
RS232 converter.
USB connection cable.

SOFTWARE FEATURES

Computer comments.
Histogram equalization, which provides accurate detection of Qmax, thus prevents artifacts from being displayed in the flowchart.
Real time acquisition of Qmax and real time display of all values
User-friendly interface.
Easy working with database. Quick retrieval of any patient data.
Warning messages for the user.
Auto-check of cable and power connections.
